AutoCAD

has the largest market share of CAD software in the world, and is used in a variety of engineering, design and manufacturing applications. History AutoCAD began as an in-house, in-house developed CAD system called "Project RAD" for Bally Software, which was developed by Bob and Don Moores, Steve Schnur, and David Hogg. It is a multi-user, multi-platform, multi-platform application (for MS-DOS, Apple Macintosh, Sun Solaris, Linux, FreeBSD, AIX, HP-UX, macOS, iOS, and Android). A few years later, Chris Charbeneau joined the project and started to work on the Windows port. The first version of AutoCAD was called "AutoCAD V1.0" in 1982. The name of the company came from the first two letters of each person's first name: Bob, Don, Chris, Steve, David and Dave. Reasons for the success of AutoCAD AutoCAD has been successful because of its capabilities, which are maintained at a high level. To ensure the continuity and performance of the AutoCAD platform, a cadalyst group (composed of technically knowledgeable, customer-driven individuals) ensures that AutoCAD's essential capabilities are maintained and updated as new and innovative technologies are developed. This cadalyst group has been proactive in ensuring that AutoCAD continues to be responsive to the changing needs of the CAD market. The team of technical contributors in the cadalyst group actively monitors the AutoCAD development team. Every time a new or significant release of AutoCAD occurs, the cadalyst group evaluates it based on the needs and requirements of customers. Cadalyst group members make decisions regarding new capabilities and improvements based on how AutoCAD is being used. "Real world" usability testing is one of the

most effective ways to ensure that a software product meets customer expectations and helps users achieve the required goals. The cadalyst group actively participates in the AutoCAD community to determine the requirements for the program. AutoCAD offers features for conceptual and actual design, drawing and technical information. The cadalyst group periodically analyzes the AutoCAD products to determine which features are being used most frequently by customers. This lets the cadalyst group prioritize the release of future AutoCAD products. Reasons for failure of AutoCAD Although it is one of the most successful CAD systems in the world 5b5f913d15
