## Microsoft Script Explorer For Windows PowerShell Free

Description We are all aware of what is built into PowerShell and how much more can be done with PowerShell if we have tools that leverage our skills. Microsoft Script Explorer for Windows PowerShell is a tool that does exactly that, empowering Microsoft PowerShell scripters to leverage the existing tools for PowerShell to automate what they know how to do and uncover what they don't know. Using a familiar Windows Explorer interface, users can start a search for solutions, browse and search the PowerShell Gallery, or locate a sample script. Because we use Windows Explorer as the user interface, we give users the freedom to explore the Windows PowerShell functionality from their existing environment and workflow. As with any tool, we want to make sure that users have the control and flexibility to leverage their existing skills. We want to support them wherever they are and empower them to do what they know how to do. We provide a common search interface to help users find what they need and quickly locate how-to documentation and relevant scripts to simplify their work. We want to help users discover resources they already have and get them started in their scripting journey. After using the tool, we found that: . Users were most surprised that they can use it on their local file system . Users were most frustrated with the lack of a search interface for online repositories . Users complained about the bulk download speed of the PowerShell Gallery The initial intention for Microsoft Script Explorer was to download the entire PowerShell Gallery to local file system. The download speed was an issue because of the large size of the data and the requirement to download all the data for all repositories. Users had to wait to get the search results or simply quit the search. We were encouraged by the feedback from the users regarding the initial download speed. We have incorporated the feedback from the users and have altered the functionality of Microsoft Script Explorer to address the issues listed above. We have added a local download feature and improved the download speed. We have also taken a step back to improve the user experience and usability of Microsoft Script Explorer. How do I get Microsoft Script Explorer for Windows PowerShell? . Start Microsoft Script Explorer from the File menu or by pressing Windows Key + R . Press "r" to open the run dialog . Paste Microsoft Script Explorer (x86).exe to the run dialog and select "Start" to launch. How do I install Microsoft Script Explorer for Windows PowerShell? . Click on the File Menu, then click on the Install button. . Follow the on screen
