The automotive and aerospace industries have found AutoCAD to be the best way to meet their design challenges, largely because of the way AutoCAD lets users work together on the same drawing. An AutoCAD drawing contains many standard objects, including dimensions, text, lines, arrows, rectangles, circles, polygons, and more. AutoCAD also provides a database of predefined symbols and parts, along with many other preprogrammed symbols and part types. AutoCAD provides tools to help you improve a design. These tools include The filter feature lets you select specific objects, such as dimensions, text, lines, symbols, and more. The filter can be used to quickly identify a specific object type, or used in conjunction with other tools to select and manipulate multiple objects at one time. The dimension tools let you add and edit dimension lines, including gridlines and guideline lines. The dimension tools can be used to The trend indicator shows the trend, or direction, of a series of objects on a drawing page. These objects include lines, circles, polylines, and more. Built-in rendering AutoCAD can render drawing information at the command line, or via a plugin. Some of the applications that create rendering views and graphics using the command line are: Grab, a command line program that creates 3D wireframes, which is also used for AutoCAD Architecture and AutoCAD Electrical. ArcCat is a simple command line program for creating CAD-rendered 2D drawings from a database, converting the database to a CAD drawing file, and outputting the rendering as an AutoCAD drawing file. This product was replaced by the built-in real-time rendering module in AutoCAD 2011. Vector-based renderers Several vector-based rendering applications are included with AutoCAD: a command line rendering application named RenderMatic, which can render to many different output formats, including PDF, EPS and TIFF. It can also be used as an AutoCAD Plug-in by using the command line rendering functionality of AutoCAD and writing the rendering to a virtual PDF file or by creating a native plug-in that writes the rendering to a file. Synchronous and asynchronous rendering (a method to render simultaneously). In this method the rendering task is shared with other CAD applications by using AutoCAD's worker threads. a plugin for the popular CAD software, FME. Preprocessor The preprocessor is a text file that contains a pre-processor script. AutoCAD's preprocessor script language is based on the C preprocessor, and it includes a number of extensions and enhancements. Actions The actions feature is used for defining a series of AutoLISP commands that can be accessed by pressing the F2 key. The user can program a series of actions that can be assigned to a toolbar button or menu item, and the action may be scripted as a text file, created as a user-defined function, or written as a VBA script. The actions feature provides a number of benefits, such as allowing users to define their own unique commands, standardizing the commands for all users, and increasing the speed of execution of commands. .NET scripts With AutoLISP and a1d647c40b
