Since quite a few of my previous comments have been waiting in the spool for me to come back to them, here is one of them - thank you for the feedback. I've actually been experiencing some problems here at work (email is a bit messed up and it turns out to be a system-wide thing), so I've really been tied up with that. I also think there are a lot of very good, free alternatives out there, like IrfanView, but I'll keep looking. I'm fairly sure I can use Photomatix to do what I want, but I'd rather not if I can avoid it. I've been tinkering with IrfanView (forgive me if I'm talking down to you, just getting back into the swing of things) and I'm pretty happy with the results so far. Thanks for all the helpful feedback. I don't think I've ever received more than one or two nice comments in a long time, so I'm glad to know that I'm getting one again. Don't know if this helps but after I had tried some new apps to edit my photos like Irfanview and Triscape FxFoto I found something that I would say is the best of both worlds, that I would not say I was disappointed with - or even good. It is called PhotoImpact. Basically, it's a professional-grade version of Irfanview and you will not be disappointed. I used the more or less freely available version of Photoshop for my own photos and it was fine for personal use. I didn't feel the need to pay for it. I can see why you want to pay for something but do I really need to pay for something that will do what I want? Not for my photos. I also use the Gimp (or in Windows that's in the installation folder that's called Gimp) for the simple and even if you can say

Triscape FxFoto Screenshots: Triscape FxFoto Reviews: I was looking for a photo editor and this one gave me a good one. Only drawback is, there are no adjustments like hue/saturation so some editing has to be done using the softwares available on the program. This program allows you to simply edit pictures for a variety of reasons. You can rotate, flip and mirror images, create collages, insert text, and many other options. I didn't want to simply edit pictures for a specific reason but instead wanted to edit several and create collages for my blog. I can't say that I regret choosing Triscape FxFoto to do this, it was very easy to do. Editing is done with a very intuitive interface. Triscape FxFoto requires Windows Vista or Windows 7. This program has worked fine for me. I was a little confused when I first got it but it was pretty easy to figure out. I do like that there is the ability to restore settings. This program will allow you to quickly and easily edit photographs. There is a large selection of editing features. This allows the user to easily make any adjustments they want without being overwhelmed by the amount of things they can do. Triscape FxFoto allows you to easily remove red eye and take other common editing tasks. I have been using this software for a few years now and it has always worked flawlessly for me. I highly recommend this program. Triscape FxFoto is a small and intuitive program. There is not much to say about it since it is a simple program. It would be nice if it had a few more features but it is a good program for the price. The program works as intended. I like the feature of being able to go back and restore settings. The program allows the user to adjust different aspects of the image. It allows the user to have a lot of control over the picture. Triscape FxFoto requires Windows 7. The program worked as intended. There is a variety of editing features but I did not like how many options there were. The interface was pretty
